1 General

1.1 Information relating to the installation instructions

The classification of the contents is based on the life stages of the linear drive (hereinafter referred to as the “device”). The manufacturer reserves the right to make changes to the technical specifications stated in these installation instructions. In detail these can differ from the respective version of the device without the factual information being fundamentally changed and without losing their validity. The current status of the technical specifications can be requested from the manufacturer at any time. Any claims arising from this cannot be asserted. Deviations from the text and pictorial statements are possible and are dependent on the technical development, equipment and accessories of the device. The manufacturer shall provide information about any differing details relating to special versions by means of the sales documentation. Other specifications shall remain unaffected by this.

1.2 Standards and guidelines

During construction the fundamental health and safety requirements were applied and provision was made for the appropriate legislation, standards, directives and guidelines. The safety element is confirmed by the Declaration of Incorporation (see section 5 “Declaration of Incorporation”). All information relating to safety in these installation instructions refers to the laws and regulations that are currently valid in Germany. All information in these installation instructions must be complied with at all times and without limitation. In addition to the safety notices and directions in these installation instructions, the regulations applicable at the place of installation with regard to accident prevention, environmental protection and occupational safety must be observed and adhered to. The guidelines and standards for safety assessment can be found in the Declaration of Incorporation.

1.3 Intended use

The unit is designed for use in façade construction. It is used for moving small loads. Other fields of application must be agreed in advance with the manufacturer.

The device must not be used in areas where there is a risk of injury to personnel or in rooms in potentially explosive environments.

If a direct or indirect hazard to personnel cannot be ruled out, additional measures (e.g. covers, barriers, etc.) must be taken in order to minimise the potential risk accordingly.

The operator alone is liable for any damage arising from the non-intended use of the device. The manufacturer assumes no liability for personal injury or damage to property caused through misuse or procedural errors, improper operator control or improper start of operation.

The device must be operated only by trained and authorized skilled personnel subject to compliance with all safety notices and directions.

Safe and error-free use and operating safety of the device can only be guaranteed subject to use in compliance the intended use in accordance with the specifications set out in these installation instructions.

Intended use includes observation of and adherence to all the safety notices and directions instructions specified in these installation instructions, as well as all applicable regulations of trade associations and the valid laws in relation to environmental protection. Use in compliance with the intended use also includes adherence to the operating regulations prescribed in these installation instructions.

1.4 Foreseeable misuse

Any installation into other equipment that deviates from the purpose cleared by the manufacture applies as being a foreseeable misuse.

1.5 Warranty and liability

In principle, the General Terms & Conditions of Sale and Delivery of the manufacturer apply. The Terms & Conditions of Sale and Delivery are a component part of the sales documentation and are handed over to the plant operator at the time of delivery. Liability claims for personal injury and damage to property are excluded, if they are attributable to one or several of the following causes:

- Opening of the device by the customer (breaking the seal)
- Use not in compliance with the intended use of the device
- Improper installation, start of operation or operator control of the device
- Changes to the design and construction of the device without the written approval of manufacturer

- Operation of the device with improperly installed connections and defective or improperly attached safety and protection devices
- Non-compliance with the safety stipulations, notices and directions provided in these installation instructions
- Exceeding of the specified technical specifications

1.6 Customer service of the manufacturer

The device may be repaired only by the manufacturer in the event of a fault. The address for sending in the device to the customer service department can be found on the inside of the back cover.

If you have not purchased the device directly from elero, please contact the manufacturer of the machine or the supplier of the device.

Mechanically secure the machine before dismantling the device.

The device must not be separated from the machine by force.

The serial number must be at hand, if you request customer service. This can be found in the top right-hand half of the type plate.

2 Safety

2.1 General safety notices and directions

These installation instructions contain all the safety notices and directions that must be observed in order to avoid and prevent dangers when working with the device in the individual life cycles. Safe use of the device is guaranteed when all the specified safety notices and directions are complied with.

2.1.1 Formulation of the safety notices and directions

The safety notices and directions in this document are marked with safety symbols and formulated in accordance with the SAFE principle. They contain specifications relating to the type and source of danger, the possible consequences, as well as the prevention of the danger.

The following table defines the representation and description of the levels of danger with possible physical injury, as used in these installation instructions.

Symbol	Keyword	Meaning
	DANGER	Warns of an accident that will occur if the instructions are not followed, which can lead to life-threatening, irreversible injuries or death.
	WARNING	Warns of an accident that may occur, if the instructions are not followed, which can lead to serious, perhaps life-threatening, irreversible injuries or death.
	CAUTION	Warns of an accident that can occur, if the instructions are not followed, which can lead to minor, reversible injuries.

The following table describes the symbols used in these installation instructions for the graphic display of danger situations in connection with the symbol for the danger level.

Symbol	Meaning
	Danger due to an electrical voltage, electric shock: This symbol refers to dangers associated with electrical currents.
	Danger of crushing and killing people: This symbol refers to dangers due to which the entire body or individual limbs can become crushed or injured.

The following table defines the representation and description used in the installation instructions for situations in which damage can occur to the product or draws attention to important facts, statuses, tips and information.

Symbol	Keyword	Meaning
	<i>CAUTION</i>	This symbol warns of possible damage to property.
		This symbol draws attention to important facts and statuses, as well as to further information in these installation instructions. Furthermore, it refers to specific instructions which give additional information on or provide assistance in how to perform a procedure more easily.

The following is an example of the structure of a safety notice:

DANGER

Type and source of danger

Explanation of the type and source of danger

- Measures to avert danger.

2.2 Safety principles

The device is built according to state-of-the-art technology and the generally accepted rules of safety and it is safe to operate. The basic safety and health requirements of the applicable laws, standards, directives and guidelines have been applied in the construction of the device. The safety of the device is confirmed by the Declaration of Incorporation.

All specifications pertaining to safety relate to the currently valid regulations of the European Union. In other countries it must be ensured by the plant operator that the applicable laws and national regulations are complied with.

In addition to the safety notices and directions in these installation instructions, the generally applicable regulations regarding accident prevention and environmental protection must be observed and complied with.

The device must only be used when in perfect working order, for its intended use, and in compliance with the safety notices and directions in these installation instructions. The device is designed for the application in accordance with the section “Intended use”. In the event of use that is not in compliance with the intended use, injury to the life and limb of the user or third parties or impairments to the device and other property can arise. Any accidents or almost accidents during the use of the device that lead to or could have led to personal injuries and/or damage in the working environment must be reported directly and without delay to the manufacturer.

All safety notices and directions specified in the installation instructions and on the device must be adhered to. In addition to these safety notices and directions, the operator must ensure that all national and international regulations applicable in the respective country of use, as well as other binding regulations relating to operational safety, accident prevention and environmental protection are complied with. All work on the device must be performed only by trained, safety instructed and authorized personnel.

2.3 General duties of the plant operator

- The plant operator is obligated to use the device only in perfect and operationally safe condition. He must ensure that, in addition to the safety notices and directions in the installation instructions, the generally accepted safety and accident prevention regulations, the specifications of DIN VDE 0100 and the provisions relating to environmental protection of the respective country of use, are heeded and complied with.
- The plant operator is responsible that all work with the device is performed only by trained, safety instructed and authorized personnel.
- Ultimately responsible for accident-free operation is the plant operator of the device or the personnel authorized by the plant operator.
- The plant operator is responsible for compliance with the technical specifications, in particular for compliance with the static loads.

Non-compliance with the static loads may cause loss of the support or holding function.

2.4 Requirements of the personnel

- Each person who is charged with performing work on the device must have read and understood the complete operating instructions before he performs the corresponding work. This also applies, if the relevant person has previously worked with such a device or was trained to do so.
- All work on the device must be performed only by trained, safety instructed and authorized personnel. Prior to the commencement of all activities the personnel must have been made familiar with the dangers that exist while handling the device.
- All personnel may perform only work that is in accordance with their qualifications. The areas of responsibility of the respective personnel must be clearly defined.
- Any personnel charged with working with the device must have no physical limitations that temporarily or permanently restrict their attentiveness or judgement (e.g. due to overtiredness).
- Minors or persons who are under the influence of alcohol, drugs or medication are prohibited from working with the device, as well as performing any installation, dismantling or cleaning work.
- Personnel must wear suitable personal protective equipment appropriate to the work incurred and prevailing working environments.

2.5 Safety notices and directions relating to the technical condition

- The device must be checked before installation for damage and proper condition.
- The plant operator is obligated to operate the device only in perfect and operationally safe condition. The technical condition must comply with the legal requirements at all times.
- If dangers to personnel or changes in operating behaviour are recognized, the device must be shut down immediately and the incident reported to your superiors or to the plant operator.
- The device may only be connected to the energy supply intended and designed for this purpose. Please refer to the type plate for the permissible type of voltage and operating voltage.
- No changes, attachments or conversions may be performed on the device without the authorization of the manufacturer.
- If wear is detected on the trapezoidal or ball screw spindle or on the spindle nut, the device must be brought to the manufacturer for maintenance.

2.6 Safety notices and directions relating to transport, assembly, installation

The relevant transport company is fundamentally responsible for the transport of the device. The following safety requirements must be complied with during transport, erection and installation of the device.

- During transport the device has to be secured in accordance with the regulations of the auxiliary transport means being used.
- For transport only hoist and slings may be used that are dimensioned so that they can safely bear the forces that occur during loading, unloading and installation of the device.
- Only the points defined on the pallet and device are allowed to be used as lifting and hoisting points:
- If work is required on lifted parts or work devices, these must be secured against falling by means of suitable devices. Work equipment for the lifting of loads must prevent loads from shifting unintentionally, falling unhindered and unhooking unintentionally.
- Standing under suspended loads is prohibited.
- A hard hat must be worn during loading work with hoists.
- The erection and installation work may be performed fundamentally only by trained and instructed skilled personnel.

2.7 Safety instructions relating to operation

- ☐ The operator of the device is obligated to ensure the safe and proper state of the device before the initial start of operation.
- ☐ This is also necessary during operation of the device at regular intervals to be determined by the plant operator.
- ☐ In the event of a fault, misuse and/or if control components are not connected correctly, this can cause the supporting and retaining function of the device to be impaired.
- ☐ No radial and/or torsional forces must be allowed to act on the device.

2.8 Safety notices and directions relating to the electrical installation

- ☐ All work on the electrical system must be performed only by authorized skilled electricians in accordance with the applicable rules and stipulations of the trade association, in particular the stipulations of DIN VDE 0100. Furthermore, the national statutory regulations of the respective country of use must be observed.
- ☐ In the event of any defects, such as loose connections or defective or damaged cables, the device must not be put into operation.
- ☐ In the event of faults with the electrical equipment, the device must be switched off immediately.
- ☐ The device must be switched off to de-energized before any inspection, installation or dismantling work.
- ☐ The device must not be hosed down with a high-pressure cleaner or steam jet.

The following must be checked before connecting the device to the power supply:

- ☐ Are all electrical connections, safety devices, fuses, etc. properly installed, connected and earthed?
- ☐ Is the power connection provided in accordance with the specifications in the electrical circuit diagram (voltage type, voltage level)?
- ☐ Has the supply line been de-energized?

3 Product description

3.1 General

The device is an electromechanical linear drive. It performs linear movements.

Fig. 1 Components of the device

3.2 Technical specifications

All information in this section relates to an ambient temperature of 20°C.

3.2.1 Summary of the technical parameters

Technical specifications	Veco
Rated voltage	230 V 1 AC, 50 Hz
Force, dynamic	1600 N
Force, static	1600 N
Stroke speed	approx. 5 mm/s
Stroke length	100 mm, 200 mm, 300 mm
Rated current	0,7 A ¹⁾
Power	161 VA
Duty cycle	KB 5 min
Length of the control and connection cables	2 m
electronic limit switch	programmable through complete stroke, minimum stroke 30 mm
Protection class	IP 65
Operating temperature range	-20 °C to +60 °C
Housing material	Aluminium, anodised
Airborne noise emission	< 70 dB(A) ²⁾
Weight	up to 6 kg

Tab. 1 Technical parameters Veco

¹⁾ If voltage surge protection devices are used, the exact current draw of the unit must be calculated prior to installation.

²⁾ 1 m distance; 1.6 m above unit; nominal operation; measuring tolerance 10 %

4 Installation

WARNING

Danger of injury due to weathering influences.

The skin may suffer frostbite or burns.

- Wear personal protective equipment.
-

WARNING

Danger of injury due to incorrectly dimensioned mountings.

Crushing and fatal injuries are possible.

- Use only fastening materials that are suitable for the dimensions of the mountings.
 - The counter-mountings (provided by customer) must be rated at least for the forces for which the device was designed.
-

WARNING

Danger of injury through loss of the support and holding function.

Crushing and fatal injuries are possible.

- Pay attention to static loads.
-

WARNING

Danger of injury due to electric current.

Electric shock possible.

- Have any electric work performed only by an authorized skilled electrician.
-

WARNING

Danger of life-threatening injury due to faulty electrical connection.

Electric shock possible.

- Check the proper connection of the PE conductor prior to initial start of operation.
-

CAUTION

Damage to the device due to radial and/or torsional forces.

- No radial and/or torsional forces must be allowed to act on the device.
-

CAUTION

Damage to the device due to the connecting rod jamming.

- The linear path of the piston must be freely moveable at all times.
 - The pivoting range of the device must be kept free.
-

CAUTION

Damage to the device due to loss of the support and holding function.

- Pay attention to static loads.
-

CAUTION

Damage to the device due to faulty electrical connection.

- For devices with protection type IP 65 and IP 65s, the ends of all cables or connectors must be protected against the penetration of moisture. This measure must be implemented immediately after removal of the device from the original packaging.
-

The device was manufactured with the circuit diagram ordered by you. The designation can be found in the sales documentation or the circuit diagram enclosed with the delivery.

In delivery condition (factory setting), the connecting rod is already slightly extended. Please refer to the sales documents for the minimum and maximum dimensions.

4.1 Mechanical fastening

CAUTION

Damage to the electrical leads due to crushing or a tensile load.

- All electrical leads have to be laid so that they are not exposed to any crushing or tensile loads.
 - Observe the bending radii of the cables (at least 50 mm).
-

Fasten the device only by the fastening elements provided for this purpose. These are located at the end of the housing and on the piston rod.

4.2 Electrical connection

WARNING

Danger of life-threatening injury due to faulty electrical connection.

Electric shock possible.

- Check the proper connection of the PE conductor prior to initial start of operation.
-

CAUTION

Damage to the device due to the use of a non-fitting or unsuitable drive control unit.

- The control unit must support all the options attached to the device.
 - Connect all the marked cable conductors.
 - Do not connect any conductors that are not marked.
-

CAUTION

Damage to the device due to faulty electrical connection.

- The motor current circuit is interrupted by integrated limit switches and must not be connected with a semiconductor relay.
-

CAUTION

Damage or destruction of the device through ingress of moisture in the connection cables.

- For devices with protection type IP 65, the customer-provided connection of the cable ends or connectors must also have IP 65 protection.
-

CAUTION

Damage of destruction of the device by faulty actuation.

- Simultaneous application of power to both directions of travel is permitted only if the limit positions of the device are to be reprogrammed. During normal operation in the application this must be prevented by suitable measures implemented by the customer.
-

The device has to be connected in accordance with the circuit diagram enclosed with the delivery.

4.2.1 Programming the limit positions

Factory setting:

The limit positions have been preset to the dimensions defined in the order confirmation.

If any other dimensions are required, proceed as described below. The minimum stroke is 30 mm.

The procedure is based on the use of a mounting cable.

A mounting cable for setting the limit positions (order under TN 232430002 (terminal) or TN 232460001 (Hirschmann coupling STAK 3)) or a switching device with two buttons that can be actuated simultaneously for retracting and extending is required.

1. Traverse the device at least 30 mm towards the centre position from the desired limit position.
2. Press both buttons on the mounting cable simultaneously for at least three seconds. The device moves briefly back and forth.
 - ✓ You are in programming mode.
The former limit positions are deleted.
3. Traverse the device to the first desired limit position.
4. Release the button at the limit position.
5. The limit position can be corrected by traversing the device briefly (< 2 seconds).
6. The limit position is saved by traversing the device in the opposite direction to the other limit position. Press and hold the button > 4 seconds. The position is saved when the device stops briefly.
7. The other limit position is programmed in the same way.
8. Programming mode is automatically closed when both limit positions have been programmed.

There should always be a short pause between every press of the button (1 second).

There is always a short pause before the device starts moving when it is in programming mode.

4.2.2 Operation of unit

CAUTION

Damage to the device due to wrong operation.

- The thermal protection switch must not be used as a regular overload switching device.
 - Fast polarity reversal of the traversing direction of the device is not permissible.
 - The device must come to a complete standstill before switching the traversing direction.
-

4.3 General dimension drawing, e. g. stroke 100

5 Declaration of incorporation

The complete declaration of incorporation can be downloaded from our website:
www.elero-linear.de/downloads.

6 Waste disposal

6.1 Scrapping

When scrapping the device, comply with the internationally, nationally and regionally specific laws and regulations valid at that point in time.

Ensure that the recycling capability, dismantling capability and separation capability of the materials and subassemblies as well as the environmental and health dangers are all taken into consideration for the recycling and waste disposal.

Material groups, such as plastics and metals of different types, must be sorted before submitting to the recycling and waste disposal process.

6.2 Disposal of waste electrical and electronic components

The disposal and recycling of waste electrical and electronic components must take place in compliance with the relevant laws and national regulations.
